Front-End Developer

- Making prototype design for the project using Adobe XD
- Making simple web design using PHP, HTML and CSS
- Connecting the code to MySQL database using visual studio code

Project

- **Twitter Clone using NextJS framework** (2023) : Twitter app clone using TypeScript, React.JS and Next JS framework for making this project, also I'm using NextAuth, Prisma, MongoDB, Taillwind CSS. And deploying the project in vercel. [Zwitter Project Clone Twitter](#)
- **Making a Portfolio Website using NextJs framework** (2022): This project is for my portfolio where i'm using ReactJS and NextJS framework to build the website and using Tailwind CSS and using Framer Motion plugin for the animation.
- **Document Archive Classification System by Applying the K-Nearest Neighbor Algorithm (Case Study: Faculty of Industrial Technology)** (2022): This project is my final college project where I created a document archive classification system using the PHP and Python programming languages with bootstrap framework, and using the k-nearest neighbor algorithm. The case study that I took was the Faculty of Industrial Technology, Ahmad Dahlan University. I created a website-based system where this system would classify a letter that had not been categorized based on the title alone, where I took the letter data in the faculty, then I used it as training data for the system I was building.
- **Document Archive Application at Muhammadiyah Al-Mujahidin Wonosari High School** (2021): In this project, I act as project manager and front-end developer, where I schedule team and client meetings, I also make website designs and do slicing designs to PHP and CSS of websites that are being built.
